Educations

- M.S. Business Analytics** · University of California San Diego, Rady School of Management Aug 2025-Dec 2026
Focus: Customer Analytics, AI for Business, Applied ML | uplift modeling and churn analysis
- M.A. Media & Integrated Product Design** · University of Pennsylvania Sep 2023- May 2025
- B.A. Communication** · University of Colorado Denver Sep 2019- May 2023

Skills

Technical: Agentic AI Automation workflow, Excel, Claude Code, Python, SQL, Tableau, R, Snowflake
Marketing Analytics: A/B Testing, Customer Segmentation, HTML, Predictive Modeling, Financial Modeling, Sensitivity & Scenario analysis, Customer Experience (CX) analytics, Performance KPI analysis, Go-to-Market analytics, Sharepoint
Strategy & Communication: Competitive Analysis, Executive Reporting, Data Storytelling, Cross-Functional Collaboration

Experience

- Merchandise Analyst (Intern)** · PlanetArt · La Jolla, CA(on-site) Jun 2026- Aug 2026
- Coded a vendor intelligence dashboard prototype with Cursor for a \$10M-revenue ecommerce merchandiser: turned an 8-step, 6-system workflow across 11 suppliers to 2 steps, turning data conflict into an assigned job.
 - Used a pricing model to analyze margin, break-even rates, and ROAS to select Doorbuster's products from 5 vendors, and set 3 different pricing targets while comparing against 3 other competitors' pricing to reach the highest margin.
 - Tuned an AI product-matching tool across the bundle range, traced its errors to products matched against single items, and gave the developer team the failure pattern for next-step recommendations, the match accuracy rose from 60% to 85%.
- Data Marketing Analyst (Part-time)** · Levra Labs LLC · La Jolla, CA (Remote) Mar 2026- Sep 2026
- Cut about 520 hours a year of manual lead research for the team by building an end-to-end outreach automation with the developer team, delivering 222 verified leads
 - Vibe coded 3 mobile-responsive, segment-specific email one-pagers in Claude Code using skills, which the CEO adopted as the standard for every initial outreach, raising communication effectiveness
 - Benchmarked 8 funded competitors on funding, stage, traction, and customer wins, then built a gap and positioning analysis the team used for pitching and GTM planning
- Data Analyst Consultant** · Thermo Fisher Scientific (UCSD Rady), La Jolla, CA Mar 2026 - Jun 2026
- Initiated a diagnostic of an Isolation Forest CX score and traced its failure to 14 of 17 KPIs moving opposite to NPS, which explained why the anomaly model ranked satisfied accounts as high risk.
 - Developed a blended scoring model that paired TreeSHAP importance from Isolation Forest with a cross-validated ElasticNet trained on survey detractor rate, raising out-of-time correlation with NPS from +0.02 to +0.43.
 - Built a leak-free pipeline with a time-based train and test split (300 and 321 segment-quarters) and winsorizing, imputation, and scaling fit only on training data, keeping future quarters out of every model decision.
 - Tested 3 alternative model designs, including feature filtering, IF outputs as regression inputs, and KMeans cluster-then-IF, and showed none beat the supervised baseline, ruling out a simple fix to the original model.
 - Validated the final model with a 1,000-sample bootstrap (95% CI +0.34 to +0.51) and a blend-ratio sensitivity sweep that held correlation at +0.42 to +0.43 across a 50% to 80% range, confirming the result did not depend on one tuning choice.
 - Proposed keeping 70% SHAP weight after finding 74% to 79% of AR dispute values were zero in training, trading 0.05 in correlation to retain a business-critical index the pure regression model dropped to 0.2% weight.

Projects

- Claude Code Job Finding Agent** | Claude Code Agentic AI
- Built a nightly pipeline over Department of Labor filings that loads 76,000 employers into a queryable database, ranks 1,900 into a rotation pool, and reports 550 qualified roles from 305 employers across 31 runs.
- Global Wine Market Investment & Sourcing Strategy (Tableau)** | Winter 2025
- Built Tableau dashboard joining 130K+ wine reviews with GDP per capita and production data in Python (Polars), scoring countries into two sourcing tiers and surfacing underpriced high-quality markets via price-rating analysis.
