

YAFEI ZHANG

San Diego, CA • (445) 800-6477 • zhangyafeijudy@gmail.com • linkedin.com/in/yafei-zhang-judie • Start from 8/31/2026

EDUCATION

M.S. Business Analytics · University of California San Diego, Rady School of Management	Expected Dec 2026
<i>Focus: Customer Analytics, AI for Business, Applied ML uplift modeling and churn analysis</i>	
M.A. Media & Integrated Product Design · University of Pennsylvania	May 2025
B.A. Communication · University of Colorado Denver	May 2023

SKILLS

Technical: Agentic AI Automation workflow, Excel, Claude Code, Python, SQL, Tableau, Power BI, , Snowflake
Marketing Analytics: A/B Testing, Customer Segmentation, HTML, Predictive Modeling, KPI analysis, Financial Modeling, Sensitivity & Scenario Analysis, Customer Experience (CX) Analytics, UI UX design, Go-to-Market Analytics
Strategy & Communication: Competitive Analysis, Executive Reporting, Data Storytelling, Cross-Functional Collaboration

EXPERIENCE

Merchandise Analyst (Intern) · PlanetArt · La Jolla, CA(on-site)	Jun 2026 – Present
• Vibe Coding a vendor intelligence dashboard prototype in Cursor for a \$10M-revenue ecommerce merchandiser: cut an 8-step, 6-system cost and margin workflow across 11 suppliers to 2 steps, scored all 11 vendors 0-100 on data quality and surfaced 4 as off-strategy, and turned every data conflict into an assigned job in a daily ops queue. • Use a pricing model to analyze margin, break-even rates, and ROAS to select Doorbuster's products from 5 vendors, and set 3 different pricing targets while comparing against 3 other competitors' pricing to reach the highest margin. • Tune an AI product-matching tool across the bundle range, trace its errors to products matched against single items, and give the developer team the failure pattern for next steps recommendation; match accuracy 60% to 85%.	
Data Marketing Analyst (Part-time) · Levra Labs LLC · La Jolla, CA (Remote)	March 2026 – Present
• Save the team about 10 hours a week and work with the developer team by building an end-to-end lead outreach automation: 19 workflows that handle discovery, verification, and outreach, deliver 222 verified leads across VC, partner, and customer lists. • Vibe coding in Claude Code using skills to build three mobile-responsive email one-pagers (one each for brands, investors, and partners) includes segment-specific messaging so each list gets the right pitch. • Benchmark 8 funded competitors in the brand-launch and supply-chain space on funding, stage, traction, and customer wins, then turned it into a gap and positioning analysis the team uses for pitching and GTM planning.	
Data Analyst Consultant · Thermo Fisher Scientific (UCSD Rady), La Jolla, CA	March – June 2026
• Rebuilt a broken customer experience score (SHAP + supervised blending), lifting correlation with customer satisfaction from ~0.02 to +0.43 and giving CX leaders an early-warning metric to act on before churn hits. • Turned model outputs into a prioritized investment roadmap, showing that 3 of 17 KPIs (Availability, Complaint Resolution, Order Accuracy) drive two-thirds of CX impact and redirecting effort to where customers feel it . • Built a risk-flagging system that surfaced 15 at-risk segments invisible to the old method, with a 50%+ higher detractor rate, giving customer success a full quarter to intervene before survey scores confirmed the damage. • Partnered with cross-functional stakeholders across CX leadership and BI engineering to translate technical findings into data-driven recommendations for non-technical leadership to adopt.	
Data & Strategy Analyst · Hawaii Dept. of Business, Economic Development & Tourism	May 2024 – Jul 2025
• Built an automated Python reporting pipeline analyzing 9 years of USDA data (production, yield, pricing), replacing manual workflows and cutting stakeholder reporting turnaround by 40%.	
Marketing & Content Strategist · MirrorAI	Nov 2024 – Jul 2025
• Ran an A/B test on report delivery flow that showed 70% of customers preferred partial previews over a 3-minute wait—findings that drove a UX redesign and improved user satisfaction. Partnered with Engineering and Product to translate customer behavior patterns into the AI development cycle, contributing to a 30% lift in customer retention.	

PROJECTS

Claude Code Job Finding Agent Claude Code Agentic AI
• Built a nightly pipeline over Department of Labor filings that loads 76,000 employers into a queryable database, ranks 1,900 into a rotation pool, and reports 550 qualified roles from 305 employers across 31 runs.
S-Mobile: Proactive Churn Management Python · Scikit-learn · Winter 2026
• Trained weighted logistic regression and Random Forest (AUC 0.688) on 27K customers to predict churn; designed 5 retention strategies using counterfactual simulation and a 60-month CLV framework.
